Divergify Setup Checklist

1. Create project folder 'Divergify' on Desktop.
   Move 'divergify-mvp-repo.zip' and 'divergify-tunnel-kit.zip' inside.
2. Unzip both archives so you have
   Divergify/ -> divergify-mvp-repo/ and divergify-tunnel-kit/.
3. Install Node.js LTS from https://nodejs.org and confirm 'node -v'.
4. Install Expo CLI globally: 'npm install -g expo-cli'.
5. Backend setup (Terminal 1):
   cd Desktop/Divergify/divergify-mvp-repo/server
   Copy env file: 'cp .env.example .env' (or 'copy' on Windows).
   Install deps: 'npm install'.
   Start backend: 'npm start' (expect http://localhost:8787).
6. Open second terminal for the Cloudflare tunnel.
7. Start tunnel kit:
   cd Desktop/Divergify/divergify-tunnel-kit
   Windows: './tunnel-cloudflared.ps1' in PowerShell.
   Mac/Linux: './tunnel-cloudflared.sh'.
   Note the https://*.trycloudflare.com tunnel URL.
8. App setup (Terminal 3):
   cd Desktop/Divergify/divergify-mvp-repo
   Set EXPO_PUBLIC_BACKEND_URL to tunnel URL (setx or export).
   'npm install' then 'npx expo start --tunnel' for QR code.
9. On phone install Expo Go, scan QR, open Divergify app.
10. Verify: Home shows logo, Chat responds, Sprint timer works.
Bonus: Add OpenAI key to server/.env for live AI replies; restart backend.
